

Test Plan for A To-Do List Web Application

- **Objectives:**

- Ensure core functionalities of the app work properly.
- Test the app's behavior across different environments.
- Test input handling, such as empty inputs.
- Catch boundary or edge case issues.

- **Scope:**

- Verify tasks can be added, marked as complete, and deleted.
- Validate UI elements like buttons, lists, and error messages.
- Test empty input fields.

- **Testing Methodology:**

- **Manual Testing:** will be used for core functionality tests.
- **Automation Testing:** will be used for automated Scripts.
- **Tools Used:** Chrome browser, Selenium WebDriver, Python.
